

Remarks/Arguments:

Claims 1, 7, 8, 10, 24, 25, 28 and 29 are rejected under 35 U.S.C. 102(e) as being anticipated by Harada et al (US 6,246,442).

On page 3 of the Office Action the Examiner states that the applicant has not defined video to be motion video. Therefore, newly amended independent claims 1 and 25 recite an electronic program guide (EPG) for displaying information including **motion video** for one or more channels ("*...providing EPG information comprising text contents and motion video for one or more channels...*"). Displaying motion video for one or more channels is shown in figures 16-18. Specifically, figure 17 shows motion video displayed for channels 134 in the current time frame 136. Furthermore, a picture of the currently selected channel 138 is enlarged and displayed in 139. Pages 23 lines 1-10 and 24 lines 6-10 of the specification further disclose this features as ("*moving picture data...are displayed...selected channel is displayed as an enlarged picture 139 of the currently selected channel*"). Therefore, Applicants' feature is different than the art of record because a user can simultaneously watch live broadcasts (motion video) of multiple channels.

Harada discloses a system for displaying information for broadcast programs. Furthermore, this information includes a representative photograph as disclosed in column 37 lines 3-9 ("*a representative photograph of a broadcasting program, a representative picture of a broadcasting program...arranged in each particular cell*"). Harada's representative **photograph is static** and therefore is different from Applicants' feature of a live broadcast (motion video) of multiple channels.

Claims 1, 7, 8, 12, 24-26 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oosterhout et al. (US 6,405,371) in view of Davis et al (US 5,559,548).

Oosterhout discloses a system for displaying information in an EPG. Furthermore, this information includes representative sub-images displayed in a mosaic pattern as shown in figure 7 and disclosed in column 3 lines 60-67 ("*sub-images are taken from the received mosaic signal*"). Oosterhout's **sub-image is static** and therefore is different from Applicants' feature of a live broadcast (motion video) of multiple channels.

Application No.: 09/806,651
Amendment Dated: August 13, 2007
Reply to Office Action of: May 15, 2007

MTS-3251US

Davis discloses a system for displaying information in an EPG. Furthermore, Davis discloses assigning priorities to supplemental text information that is displayed. For example, the title of a program may have more priority to be displayed than the description of the plot. Davis, however, teaches displaying **only text** which is different from Applicants' feature of a live broadcast (motion video) of multiple channels.

Accordingly for the reasons set forth above, claims 1 and 25 are patentable over the art of record.

Claims 2, 7, 8, 10, 12, 13, 15, 16, 18 and 24 include all the features of claim 1 from which they depend. Thus, claims 2, 7, 8, 10, 12, 13, 15, 16, 18 and 24 are also patentable over the art of record for the reasons set forth above.

Claims 26-29 include all the features of claim 25 from which they depend. Thus, claims 26-29 are also patentable over the art of record for the reasons set forth above.

In view of the amendments and arguments set forth above, the above-identified application is in condition for allowance, which action is respectfully requested.

Respectfully submitted,

Allan Ratner, Reg. No. 19,717
Attorney for Applicants
